## Linear Unit MTJ 40

The MTJ linear units have toothed belt drive and compact dimensions to provide high performance features such as high speed and good accuracy. The unit MTJ have a pretensioned steel reinforced AT polyurethane timing toothed belt.
In conjunction with a zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

All parts in the profile are protected from dust and other contaminations. As corrosion-resistant protection strip is available as option.

Dimensions in mm.
Modulus of Elasticity: $\mathrm{E}=70000 \mathrm{~N} / \mathrm{mm} 2$
Operating Temperature ( ${ }^{\circ} \mathrm{C}$ ): $0 \sim+60$ For operating temperature out of the presented range, please contact Rollco.
Duty Cycle: 100\%
Max. Acceleration ( $\mathbf{m} / \mathbf{s}^{\mathbf{2}}$ ): 50 (Optional, acceleration up to $70 \mathrm{~m} / \mathrm{s}^{2}$ possible if used without INOX seal strip)
Max. Travel Speed (m/s): 1.5 (Optional, travel speed up to $6 \mathrm{~m} / \mathrm{s}$ possible if used without INOX seal strip)

1. Drive block with pulley
2. Corresion-resistant protection strip (available also without protection strip)

AT polyurethane toothed belt with steel tension cords
4. Carriage with built in magnets
5. Aluminium profile-hard anodize
6. Linear ball guideway
7. Central lubrication port, both sides
8. Tension end with integrated belt tensioning system

Deflection of the linear unit

(1) Letine tobatal

## General data

For lengths/stroke over the stated value in the table, please contact Rollco. Values for max. stroke are not valid for double carriage (equation of defining the linear unit length for particular size of the linear unit needs to be used).

For minimum stroke below the stated value In the table, please contact Rollco.

## Recommended values of loads

All the data of static and dynamic moments and load capacities stated in the table are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety. We recommend a minimum safety factor (fs $=5.0$ ).

Modulus of elasticity
$\mathrm{E}=70000 \mathrm{~N} / \mathrm{mm}^{2}$

## General data double carriage

## A - Distance between carriages.

Max. travel speed and max. acceleration of linear unit with the corrosion-resistant protection strip is $1,5 \mathrm{~m} / \mathrm{s}$ and $50 \mathrm{~m} / \mathrm{s}^{2}$ respectively.

The stated values are for strokes up to 500 mm . No load torque value increases with stroke elongation.

Max. acceleration $\left(\mathrm{m} / \mathrm{s}^{2}\right): 70$
For acceleration over the stated value, please contact Rollco.

| Designation | Carriage version | Dynamic Load <br> Capacity C $(\mathbf{N})$ | Static Load <br> Capacity C0 $(\mathbf{N})$ | Dynamic Moment <br> Mx $(\mathrm{Nm})$ | Dynamic Moment <br> My $(\mathrm{Nm})$ |
