

## MCE

Mini electric cylinder MCE is a mini linear drive with a piston rod. By using an integrated precision ball screw drive, the rotary motion (rotation) of the drive shaft is converted to the linear motion (translation) of the piston rod with high mechanical efficiency and low internal friction.

A preassembled standard motor (in-line with a motor adapter and a coupling or in-parallel with a motor sidedrive and a timing belt) together with the standard drive, makes the system plug and play ready. Compact dimensions and optimally selected motor combinations cover a wide range of applications.

The aluminium cylinder profile includes T-slots on the bottom for fixing the electric cylinder, as well as side slots for clamping fixtures and magnetic field sensors.

Options, such as female piston rod end and extended piston rod, together with a wide range of accessories make this product highly flexible. There is also an option of the mini electric cylinder without the preassembled motor if an individual motor is required.

For applications, where higher resistance to lateral loads or torsional moments is required, a guiding unit GUC can be used. By using the guiding unit, which offers high precision guiding and positioning, the mini electric cylinders can easily be combined to the multi-axis systems.

Each MCE is optimally pre-lubricated and ready for a maintenance-free operating process.

### Note!

All the data of the dynamic load capacities (ball screw drive) stated in the tables are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety and service life.

We recommend a minimum dynamic safety factor of 5,0 or more. Please refer to the Technical Information document where calculation of the safety factor of the ball screw drive and how the applied load affects the service life are presented.

All dimensions are in mm. The scale of the drawings may not be equal.

Please see the attached Technical information document for further information and data.

Contact us if you have questions or need additional information.

**Absolute Stroke:** 25, 50, 75, 100, 125, 150, 175, 200

**Max. Stroke (mm):** 200

**Max. Repeatability (mm):**  $\pm 0.015$  (valid for one-directional axial load)

**Max. Acceleration (m/s):** 20

**Max. Angle of Piston Rod Rotation:**  $\leq \pm 1^\circ$  (refers to device in new condition)  
**Width (mm):** 25.0 / 32.0 / 45.0 (cylinder profile)  
**Height (mm):** 25.0 / 32.0 / 45.0 (cylinder profile)  
**Ambient Temperature (°C):** 0 – +50 (0 – +60 without a motor)  
**Protection Class:** IP40  
**Duty Cycle:** 100%  
**Maintenance:** Life-time pre-lubricated

Combination with a standard motor and a motor adapter VK

- 1 - Compact aluminium cylinder profile
- 2 - Piston rod (stainless steel) with an anti-rotation device
- 3 - Piston rod end (optionally a female thread is available)
- 4 - Motor adapter VK with a coupling
- 5 - Preassembled motor (with/without brake)
- 6 - Standard connectors (motor, encoder and brake - optionally)
- 9 - Slots for mounting
- 10 - Slots for the magnetic field sensors (size 32 and 45) or mounting the sensor holder (size 25)

Combination with a standard motor and a motor side drive MSD

- 5 - Preassembled motor (with/without brake)
- 6 - Standard connectors (motor, encoder and brake - optionally)
- 7 - Motor side drive with a timing belt

**Without a motor**

- 3 - Piston rod end (optionally a female thread is available)
- 8 - Drive shaft of a precision ball screw drive
- 9 - Slots for mounting
- 10 - Slots for the magnetic field sensors (size 32 and 45) or mounting the sensor holder (size 25)

## General Data

Max. permissible axial load and payload values depends on the selected motor, travel speed and acceleration of the piston rod.

Max. permissible axial load, payload and max. travel speed values are valid for the entire stroke range. Guiding unit GUC is not taken into consideration.

Max. horizontal permissible payload value is valid for the payload supported by an external guiding (coefficient of friction 0,1 is taken into consideration).

Dynamic axial load capacity of the ball screw drive value is the basis for calculating the service life.

The moved mass is already considered in the equation for calculating the mass of the mini electric cylinder  $m_{MCE}$  and the mass moment of inertia  $J_{MCE}$ . The moved mass includes the mass of the piston rod with the internal anti-rotation device and ball nut.

For combination with standard motor and motor adapter VK or motor side drive MSD, the mass of the mini electric cylinder  $m_{MCE}$  should be increased by mass of the motor and motor adapter VK or mass of the motor and motor side drive MSD respectively. See table below.

Mass and moved mass of the guiding unit GUC are not included in the moved mass  $m_{m,MCE}$  in the mass  $m_{MCE}$  and in the mass moment of inertia  $J_{MCE}$ . Please refer to the guiding unit for more information.
