Linear Unit MTJZ 110

The MTJZ series contains Z-axis linear units with toothed belt drive, integrated ball rail system and compact dimensions. This linear units provide high performance features such as, high speed, good accuracy and repeatability by vertical applications.

In the linear units MTJZ is used a pre-tensioned steel reinforced AT polyurethane timing toothed belt. In conjunction with a zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.

The in the profile slot driving timing belt protects all the parts in the profile from dust and other contaminations. The drive block provides the possibility to attach a motor or gearbox housing and additional accessories on it.

For CAD-files please contact Rollco.

Dimensions in mm.

Modulus of Elasticity: E = 70000 N / mm2
Operating Temperature (°C): 0 ~ +60 For operating temperature out of the presented range, please contact Rollco.
Duty Cycle: 100%
**Max. Acceleration (m/s²):** 70
Max. Travel Speed (m/s): 5

1. Tension End with integrated belt tensionin system
2. AT polyurethane toothed belt with steel tension cords
3. Aluminium profile - hard anodized
4. Linear ball guideway
5. Clamping and braking element for linear guideway
6. Drive block with pulley. Motor flange with built in magnets
7. Central lubrication port, both sides
8. Tension end with integrated belt tensioning system

Deflection of the linear unit

MTJZ

Fixed - fixed mounting

Fixed - free mounting

δ   Maximum deflection of the linear unit [mm]
δmax   Maximum permissible deflection of the linear unit [mm]
F   Applied force [N]
Lp   Unsupported profile length [mm]

*The maximum permissible deflection δmax must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δmax additional profile supports are needed.*
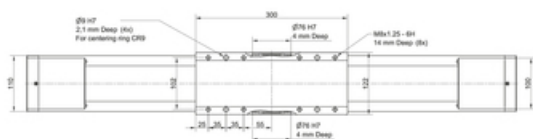

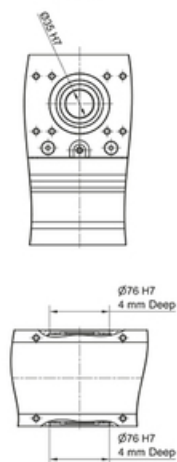

Deflection of the linear unit

MTJZ 110

① The linear units do not include any safetey stroke.
Absolut stroke = Effective stroke + 2 x safety stroke.

① All dimensions in mm. Drawings scales are not equal.

① All dimensions in mm. Drawings scales are not equal.

Drive block with clamping element

Clamping by spring-loaded energy
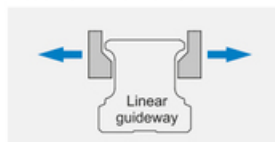

Linear
guideway

Opened by air pressure

Linear
guideway

Air pressure = 0 bar

Holding force = 1400 N

Holding force is tested on clamping
element using a slightly lubricated rail (ISO VG 68).

Opening air pressure = 5,5 - 8 bar

The air pressure opens clamping pistons.
Free movement is allowed. Purified and oiled air
shall be used (according to ISO 8573-1 Class 4).
Recommended filter size is 25µm.

Linear Unit	Mass of drive block (kg)	Mass of linear unit (kg)
MTJZ 110	12,9	23,3 + 0,0147 * Stroke (mm)

① All dimensions in mm. Drawings scales are not equal.

Defining of the linear unit length

L = Effective stroke + 2 × Safety stroke + 496 mm

Ltotal = L + 46 mm

STROKE

Multi drive block

L = Effective stroke + 2 × Safety stroke + 300 × n_b + 196 mm n_b - number of drive blocks
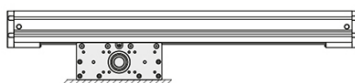

Ltotal = L + 46 mm

General Data

For minimum stroke below the stated value, please contact Rollco.

For length/stroke over the stated value, please contact Rollco. Values for max. stroke are not valid for multi drive box (equation of defining the linear unit length for particular size of the linear unit needs to be used).
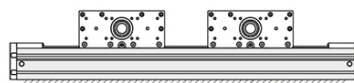

Recommended values of loads
All the data of static and dynamic moments and load capacities stated are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety. We recommend a minimum safety factor (fs =5.0).

Version 1: Mounting by the drive block, profile travels

Version 2: Mounting by the profile, drive block travels

On request, multi drive blocks, which travel independently of each other, can be applied.
