

Synchronisation Shaft OSR

For longer distances bearing supports needed, please contact Rollco.

Installation:

The overall length L_t is best determined as the distance between shaft ends - length L_w plus $2 \times$ dimension H .

For CAD-files contact Rollco.

Dimensions in mm.

Explanations to the table below:

M_s = Screw tightening torque (Nm)

M_T = Maximum transmissible torque (Nm)

CT = Torsional rigidity per meter (Nm/rad)

Selection diagram

Ideal execution for long distance shaft connections. Torque transmission is zero backlash. Designed for lengths up to 4m without bearing support (depending on rotation speed).

Standard lengths available up to 3m. For longer lengths, please contact us.
